It all works together.

All our rear door products work together, but there is a certain order to installing.
Installing multiple products? Here's the the best way for your configuration.

With the order sorted, let's get to the good part: installing. →

Let's get to work.

Preparation

1. Remove the rear door plastic trim / panel by removing two screws located in the top grab handle. One is inside the front handle, and you'll need to pry off the covers to reveal one last screw where the strap is located.
2. Carefully pull the plastic trim off the door.
3. Remove the net by removing the seven screws from the back panel, before unclipping the net.

Installation

4. Place the supplied metal spacer on the bottom edge between the cage and the plastic panel.
5. Position and attach the cage using the supplied M5x16 dome head screws.
6. Turn the back panel over and secure the rear cage using the supplied M5 nyloc nuts and washers.
7. Ensure all the clips/lugs are in place prior to refitting the panel.
8. Clip the top part of the plastic door trim panel first, before securing the rest of the clips. If desired, the straps can be cut off.
9. That's it, you're done!
