Time

15 minutes / Half a beer

For further information contact KAON on **07 3180 1470** or info@kaon.com.au

It all works together.

All our rear door products work together, but there is a certain order to installing. Installing multiple products? Here's the the best way for your configuration.

With the order sorted, let's get to the good part: installing. →

Let's get to work.

Preparation

1. If you already have a KAON Rear Door Table installed, remove the table to gain access to the lower mounting holes on the cage.
If you are also installing the Centre Cage, we recommend doing that first.

If you are also installing the Centre Cage, we recommend doing that first.

2. Position the cages on the rear door. You want to ensure they sit snugly within the recess of the door trim. Ensure the base of each cage is level with the door and flush with the bottom of the recess.

3. With the cage firmly pressed against the back of the door trim, mark the placement of the four mounting holes within each cage.

Installation

4. Drill 3mm holes at each of the marks.
5. Attach the cages using the supplied self-tapping screws. Note that the screws may be best accessed from the mesh front of the cage. If you have one on hand, we recommend using longer screwdriver to tighten the lower screws.

Whatever you do, **DO NOT OVERTIGHTEN** the screws.

6. You're ready to go! Your new Pocket Cages are rated to hold 2kg each, and the mesh on the front is Molle compatible. You can also access the spare wheel cover bolts by threading a socket through the central cutout in the right cage.
