Bolt Torque

DIAMETER (mm)	5mm	6mm	8mm	10mm	12mm
NEWTON-METRES (Nm)	5 Nm	9 Nm	22 Nm	44 Nm	77 Nm

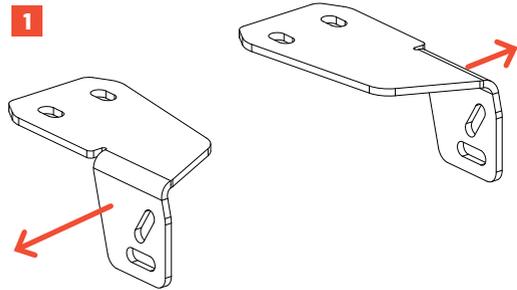

Let's get to work.

Installation

1. Identify the desired position and orientation of the light bar mounts on your Cross Bars. To be in the correct orientation, the folded vertical edge of the bracket must be facing outwards, as pictured.

Note that the brackets can be mounted facing downwards or upwards depending on your preference.

2. With the position confirmed, loosely assemble each light bracket with the fastening hardware through each mounting point as pictured.
3. Drop the Unistrut nuts into the selected channel you'll be mounting to and slide the light bar brackets into their approximate position.

Installation cont.

4. Space the brackets to the length of the Light Bar you'll be using, and secure the Light Bar to each bracket.

Due to the sheer number of Light Bar variations, we can't supply the hardware for this. Hardware is often included with the Light Bar itself, but if you don't have any a trip to the shops may be in order.

5. Confirm the position of the mounted Light Bar on the Cross Bars and tighten all hardware until secure.
6. That's it, you're done!
All that's left to do is route the cable for your Light Bar - we'll leave that part up to you.

Local Knowledge & Assistance

We know half the fun of building your dream 4x4 is getting your hands dirty. But we also know that sometimes, things don't go to plan. If in the pursuit to build the ultimate setup you find yourself off-track, we're here to help you get unstuck.
