Let's get to work.

Installation

1. Slide the seat backwards, so it sits in the rear-most position.
2. Loosen off the front seat nuts, noting that they can be pretty tight! You need a 3-4mm gap, so wind the nuts up to the top but don't undo them completely. It can be tricky to get to these on the passenger seat, so if you have one, a ratchet spanner is helpful.

Installation cont.

3. Lift up the seat and slide the bracket between the seat and the rail, one side at a time. You may need a screwdriver to assist with levering it into position. The bracket is correctly installed when it slides all the way into the bolts and sits almost flush with the seat slide mechanism.
4. Once it's in properly, wind back down the nuts and tighten.
5. Check that the bracket slides with the seat, before mounting the fire extinguisher of your choice. We recommend a 1kg extinguisher, and provide M5 bolts and nuts to secure it.
6. That's it, you're done!

G8.8 Bolt Torque (Non-Lubricated)					
DIAMETER (mm)	5mm	6mm	8mm	10mm	12mm
NEWTON-METRES (Nm)	6 Nm	10 Nm	15 Nm	22 Nm	35 Nm

Local Knowledge & Assistance

We know half the fun of building your dream 4x4 is getting your hands dirty. But we also know that sometimes, things don't go to plan. If in the pursuit to build the ultimate setup you find yourself off-track, we're here to help you get unstuck.
